Lavasoft Ad-Aware

When it comes to a high end gaming computer, only the best will do. One look at those specs at that price and you know it's a deal. Counter Strike, World of Warcraft, BF2, it can handle them all and do it well. This machine packs the awesome power of the Intel Core 2 Duo with amazing specs on memory, graphics cards etc... Being SLI ready meant we had to include two PCI-E graphics cards.

But if you still need more, just give us a call, we make them even more hard core than this.
